

MPT-9

Mechanical Pan-Tilt Unit for use with Cambo Booms

The MPT-9 Mechanical Pan Tilt unit fits directly onto the Cambo V15 boom and uses a small adapter set to fit the V40. The camera unit weighs 2.3kg (22 lbs.) and supports cameras up to 10kg (5lbs). While the standard control unit has a combined pan-tilt handle, an optional handle set is available for independent pan and tilt control.

Control units are attached to a modular tube frame that allows for personalized setups for the V15 and V40.

The optional handle set also provides remote camera zoom and focus control possibilities.

Pan and tilt rotations are possible up to 340°, depending upon the flexibility of the setup.

The camera unit's fluid friction system makes extremely smooth combined pan and tilt movements possible. The MPT-9 now has an adjustable friction control.

- **MPT-9 is available for**
 - ARTES
