

„Little Brother“

For many years the ClassicBall series have been appreciated by demanding photographers worldwide. The NOVOFLEX Präzisions-technik GmbH is now rounding down this popular series.

ClassicBall CB 2 is the name of the new ballhead with which the Memmingen producer accomodates the ever growing market for compact system cameras and the consumers' demand for compact equipment.

Like its two bigger brothers CB 5 II and CB 3 II, the youngest development distinguishes itself by high-class materials, an outstanding manufacturing and by the well-known and appreciated features:

- The centralized rasterized friction adjustment for the preliminary slow-down of the ball leads to results that can be reproduced at any time. It is also possible to adjust an ever lasting handling, even in case of different camera- and lens' weight. This comfort is completed by an engraved scaling.
- Offering three vertical 90° openings for the ball neck it complies to any nonstandard shooting position.
- The full metal construction in connection with advanced polymer materials reduces the vibration attitudes to a remarkable degree, thus merely eliminating the risk of camera shakes. Moreover, the use of outstanding materials enables working a long time without wear-out of the ball.
- All adjusting elements like friction-, locking- and panorama panning knob are arrayed logically and are optimised for operation under difficult conditions. Even while working under low temperatures, the photographer can set and check all functions reliably without removing his gloves.

Amazing is also the possibility to turn the ClassicBall upside down. By this new, extraordinary positioning of the ball, an even more precise, horizontal levelling can be effected by using the engraved scaling which is positioned at the bottom of the housing. Moreover, the CB 2 is fitted with a 360° scaling, which enables utmost precise panorama settings and which is an ideal start into the fascinating world of landscape photo shoots.

The instrumentation is rounded up by an 1/4" and 3/8" camera and tripod thread. The ClassicBall 2 is available from now on.

A modified power pack

CB5 II is the new power pack of the successful ClassicBall series which is replacing its predecessor CB5. The modified version can be used now upside down and is offering the same unique features as the ClassicBalls CB2 and CB3 II. Thus, all of the three ClassicBall heads can be used in the conventional way or turned upside down by 180°. The CB5 II is available from now on.

Technical data:

	CB2	CB3 II	CB5 II
Weight:	315 Gram	375 Gram	970 Gram
Load support:	5 kg	8 kg	12 kg
Order code:	CB2	CB3 II	CB5 II
